

SZG578 auto-cleaning solar led street light

Applications:

- urban main roads, secondary roads
- county, township, town, village road
- economic development zone and high-tech park road
- industrial and mining plant road
- tourist attractions
- resort road
- park, parking roads
- villas and high-end residential roads

Description of performances:

❖ Auto-cleaning function for solar panel

- A solar powered auto-cleaning device controlled by bidirectional synchronous motors.
- Powered by independent solar panels and built-in lithium ion battery with high reliability.
- Automatically clean the dust, snow, dirt, etc. on the solar panel three times per day to ensure that the surface of the solar panel is clean and maintain high sunlight absorption.

❖ Super brightness Philips led chip

- led chip luminous efficiency: **240 lm/W @40mA**
- light efficiency of luminaire: **200 lm/W**
- The thermal resistance is only 3°C and 75% lower
- The illuminance is 50% higher
- average service life: ≥100,000 hours

❖ Low temperature powerful lithium iron phosphate battery

- Adopt low temperature powerful lithium iron phosphate battery which can discharge at -25°C reliably.
- cycle life: ≥3000 cycles for more than 8 years' use
- cell capacity: 6000mAh
- Less than 3mΩ internal resistance can reduce internal energy loss and offer high current discharge.
- High temperature discharge efficiency is over 95%.
- Low temperature discharge efficiency is about 70%.
- free of cobalt and other heavy metals
- no fire, no explosion, absolutely safe and reliable
- warranty: 5 years

❖ High efficiency mono solar panel

- high efficiency mono solar wafers
- solar conversion efficiency: 23%~24%
- wafer specification: 182*182 mm
- lifespan: ≥25 years
- Average attenuation speed: 0.6%
- 25 years maximum output power attenuation: 15%

❖ Intelligent solar controller

- adopting MPPT technology to track the maximum power of solar panel
- MPPT efficiency: ≥99.9%
- charge conversion efficiency: ≥98.5% (MPPT)
≥94.5% (PWM)
- constant current drive efficiency: ≥96% (MPPT)
≥95% (PWM)
- IPT(intelligent power technology) can adjust the optimal power according to the weather conditions of the next 7 days and the remaining energy of the battery to ensure 365 days' lighting every day
- control mode: light control, time control, induction control

Microwave sensor

Microwave sensors *detect* the human body motion by emitting high-frequency radio waves. When human motion is detected, the microwave sensor is triggered and the lamp becomes 100% brightness. When the human body has left the lamp, the microwave sensor closes the trigger and the lamp becomes weak light, which can extend the lighting time.
